

The drive is on for MEP.

Moves to new premises with larger warehouse.

To distribute Delta Electronics high technology motor drives.

Driven by the growth in sales of its Max Motion range of products, MEP is moving to a new location in Bristol Circle Oakville, October 1, 2005. The new premises let MEP offer their customers an even wider choice of sizes and models that can be shipped from inventory. And they now have room for their newest product line - high tech AC motor drives, servos, PLCs, and controllers made by the Taiwanese electronics giant, Delta Electronics.

The story of Max Motion

Low cost, high performance! The Max Motion range of motors and controls has become MEP's biggest seller.

MEP had identified the need for good, general purpose, AC and DC industrial motors in Canada, priced to meet today's market price realities. And, in China, they found manufacturing partners who could design

Max Motion has become synonymous with great value for money with an impressive range of quality features.

and build the sort of motors their customers wanted. These new motors, name branded 'Max Motion' by MEP, have met with such success that MEP will continue to expand the product line in months to come.

The success of the Max Motion products is a good reason for having 20,000 sq. ft. of warehouse space.

And now MEP have been appointed the Canadian distributor for Delta Electronics, Inc., of Taiwan and their range of high tech AC motor drives, Servos, PLC controls, HMIs and Thermal Controllers.

Delta Electronics Corporation of Taiwan is a world class developer, designer and manufacturer of electronic components for most major computer brands.

Who are Delta Electronics?

It's very likely you already own something made by Delta. Most popular brands of P.C.'s and laptops have incorporated power supplies, or video displays designed and manufactured by Delta's research engineers.

Delta's automation products are truly leading edge, and the AC controls come in a range of various 600Volt models for Canadian voltage requirements.

An MEP team visiting Delta Electronics in Taiwan was particularly impressed by Delta's line up of industrial automation products, loaded with many features and benefits. Now these products are sold in Canada.

Delta AC motor drives are available from MEP's locations in Oakville and Montreal and they are fully supported, warranted and serviced in Canada.
